

iFIT Tag Printing Service

Idox Health's GS1 compliant RFID tag printing and delivery service

Maintaining an adequate stock of RFID tags for the iFIT system is ultimately the responsibility of the department head, be it Medical Records, Engineering or Estates.

Idox Health recognises however that we can assist with this process. That is why we provide a service to help ensure that your stock of RFID tags does not shrink to levels where the seamless working of your department is negatively impacted.

Idox Health encodes and prints ready-to-use RFID adhesive tags to suit every item catered by our systems.

This includes case notes, medical devices and other hospital assets.

Our tag printing service is directly integrated to our iFIT operations in order to reduce the costs of designing and producing RFID labels – allowing us to pass on our savings to you, and save you the headache of dealing with unresponsive third parties.

Simply contact your account manager, place your order and we'll produce your tags and have them directly delivered to you on time.

The RFID tag on the back of the label is associated with the relevant key in the iFIT database and allows the label to be read by sensors.

Order your tags today

To order your tags and receive a quote directly from Idox Health please get in touch with your account manager.

Otherwise, please send an email to idoxhealth@idoxgroup.com with the following information:

- » Type of tags to be printed (including the appropriate keys for GS1 compliant tags).
- » Number of tags to be printed.
- » Starting tag number.
- » Delivery address.
