

iFIT Mobile Devices

Market-leading mobile RFID tag readers, bringing enhanced performance and the latest smart technology to asset tracking and records logistics management

Benefits at a glance

- » **Unrivalled scanning performance** – achieves scanning speeds of 700 RFID per second, and a scanning distance of up to eight metres
- » **Enhanced scanning coverage** – improved directional reach for better coverage and rapid asset identification
- » **Boosted patient and clinical safety** – quickly tracks damaged or maintenance-ready equipment for optimum patient care
- » **Easy connection and security** – detachable smartphone option supports your preferred technology (iOS or Android)
- » **Robust hardware** – ruggedized features provide drop resistance up to a height of 1.5m
- » **Trusted software supplier** – backed by proven resource and innovation

We're delighted to introduce our latest mobile device to the iFIT hospital management suite. As a premium scanning solution, the handheld devices boast better performance and better quality, in turn delivering greater efficiencies for Trusts across the UK.

How do the mobile devices fit into the iFIT suite?

Investing in new technology and keeping pace with developments in the market allows us to take our iFIT platform further in terms of capability, offering increased performance and security for a market-leading solution.

Supporting your existing asset and records tracking by using the latest smart technology, the new devices work as part of the iFIT platform, making it even easier and faster to locate, manage and utilise vital hospital equipment and patient records.

What's new about the latest iFIT mobile devices?

iFIT's new mobile devices offer better performance, coverage, range and location accuracy – allowing scanning from over five metres away from equipment and medical records. The 'go-find' devices feature a 'cradle' which accepts a mobile phone, running either iOS or Android operating systems. The new handsets are also ruggedized, which means they are more robust if dropped, and protected against dust and water.

Are the devices easy to implement and use?

We'll work with you to implement your new scanners in line with your iFIT platform implementation.

With an ergonomic and lightweight design and clear visibility, the devices offer comfortable long-term working and connect easily with the host device. They also feature excellent reading performance of 1D and 2D barcodes and RFID tagged assets and records.

For customers on version 2.18, and above of the iFIT platform, you can easily get started with your new devices. For those running earlier versions, please discuss upgrades with your Account Manager.

Interested in finding out more?

We're enabling NHS Trusts and Health Boards to meet their targets by significantly reducing the cost of managing patient records, medical devices and hospital equipment.
